SPECIAL SETUP INSTRUCTIONS
(IF INTERNET IS AVAILABLE)

Matthew D. Turner
Department of Psychology, Georgia State University
mturner46@gsu.edu

At previous SEPA workshops the internet was unavailable during the computer setup. We expect the same situation this year. If the internet is available, setup can be simplified.

Important! These modifications will only work if (1) you have a stable internet connection and (2) the internet connections is fast! If connections are not so good, do NOT follow these modifications! (If in doubt, ignore this page entirely!)

If the internet is available:

1. Install R as described in the instruction handout, up to the step where you install "packages." We will be skipping the package steps if the internet is available. (For PC's, we skip steps 4-7; for MAC's we skip steps 5 & 6.
2. Install R Studio as described.
3. When R Studio is installed, running, and set to the Workshop directory, run the file "internet_package_installer.R" – to do this:
    a. In the console window type:

    ```
    source("internet_package_installer.R")
    ```

This command will do the hard work of installing the needed commands for the workshop today.
